Owner

VOLT CODE AI v5.0 Upgrade

This Pull Request integrates the major system specifications of v5.0, restoring placeholder features and fully wiring up active widgets.

Key Enhancements:

- Sentinel Background Watchdog:** Upgraded from static text chips to a live debounced checker, animated severity heatmap, and passive issue log feed with instant patching.
- Agent Chat Console:** Replaced the duplicative dropdown modal with a chat console containing workspace memory context and direct trigger command buttons (Audits, Scans, explain, Auto-Fix).
- Unified Line-by-Line Diff:** Implemented custom LCS diff highlighting (green additions/red removals) with line numbers and a copy button in the Diff modal.
- Dedicated Terminal Log Stream:** Added a virtual diagnostics stream showing real-time event logs at the bottom of the editor.
- Keyboard Shortcuts Guide:** Supported \Ctrl+Enter, \Ctrl+Shift+F, \Ctrl+/, \Ctrl+K, \Escape, and ?\ key mappings.
- Documentation Tab (SPEC-001 & SPEC-002):** Redesigned the About view to render both the Technical Specification White Paper (SPEC-001) and the Dead-to-Alive system logs sheet (SPEC-002).

All code changes have been verified and built successfully using the Vite bundle pipeline.

😊

Code Review

This pull request upgrades the Volt Code AI application to version 5.0, introducing a conversational Agent Orchestrator chat console, a background Sentinel passive scanning watchdog with a diagnostic heatmap, a virtual terminal log stream, and a unified line diff visualizer. The API handler has also been updated to support custom prompts and plugin diagnostic logic. The review feedback highlights critical improvements for React state management and user experience, including wrapping the logging function in a callback to stabilize dependencies, resolving potential race conditions and stale closures in the debounced Sentinel scanner hook, and disabling chat inputs during active analysis to prevent concurrent requests.

 Important

The [consumer version of Gemini Code Assist on GitHub](#) is being sunset. Starting **June 18, 2026**, new organization installations will be blocked, and all code review activity will officially cease on **July 17, 2026**.

For more details on the timeline and next steps, please review the [Help Documentation](#).
